Application/Control Number: 10/043,650

- Art Unit: 3662

- 1. The drawing correction filed 7-14-03 has been approved by the Examiner.
- 2. The response filed 7-14-03 is acknowledged.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dixon in view of Yamamoto et al or Yajima et al, both newly cited.

Dixon teaches the claimed method and structure including: fixed terrestrial user terminal antenna (Figures 2-4) for satellite (202 and 208) communication systems in which satellites orbit earth in a constellation comprised of a plurality of spaced orbital planes (Figure 10, column 5, lines 58-61, 901, and column 16, line 8 to column 17, line 35), terminal antenna base (Figures 2-4), tilting the antenna (column 12, lines 4-47), electronically scanned phased array antennas (Figure 3 and column 10), satellite tracking (column 9, lines 12-31), and adjusting angle for Earth's rotation (column 21, lines 17-33).

Yamamoto et al teaches an antenna (1, 11) device for satellite tracking including tilt plates (65-67 and 72).

Application/Control Number: 10/043,650

- Art Unit: 3662

Yajima et al teaches an antenna (20) device for satellite tracking including tilt plate (33).

Page 3

The fixed terrestrial user terminal antenna of Dixon has a tilt adjustment (column 11, lines 4-8, column 12, lines 4-47). For ease of use and to facilitate tilt adjustment, obviously the antenna (301) can be connected to the base (306) by the use of a tilt plate as taught by Yamamoto et al or Yajima et al.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Theodore M. Blum whose telephone number is 703-305-1833. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Tarcza can be reached on 703-306-4171. The fax phone numbers for the organization where this application or proceeding is assigned are 703-306-4195 for regular communications and 703-306-4195 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1113.
